For Immediate Release

FLOORTEK FEATURES MACHINERY FROM OVERSEAS
EXHIBITOR MODRA BRINGING Mtuft MACHINE TO FLOORTEK

Dalton, GA—As an international trade show in the carpet capital of the world, FloorTek attracts exhibitors not only from across the United States, but also from across the world. Australian based company Modra is one of these international exhibitors.

Modra is hauling more than their employees to FloorTek—this year, the company will be carting their Mtuft Machine to set up and demonstrate on the showroom floor. This machine changed the way sampling and product development of tufted carpets was done: the combination of conventional tufting machine components with a highly sophisticated control system means that one machine can sample a large range of gauges, stitch rates and constructions. This gives a single Mtuft machine the sampling capability of many production machines.

Modra also offers a variety of other sampling products, as well as robotics and machinery support. Their products are available in more than thirty countries. Visit Modra in booth 113 at Floortek, September 10-12.

For more information about Modra products, contact sales@modra.com. For more information on sessions and events at FloorTek, visit floor-tek.com or contact Stephanie Manis at manis@americanfloor.org.
